

UPDATED ERP ENSURES QUALITY AND COMPLIANCE

Food and beverage manufacturers are challenged with maintaining quality and compliance standards in a changing environment. Unfortunately, many of these organizations have Enterprise Resource Planning (ERP) solutions that are obsolete when it comes to combating these challenges. Top performers are more likely to be implemented on the most recent release in order to avoid obsolescence.

Organizations on the most up-to-date version of their ERP are:

32% more likely to have traceability of components and items throughout the purchasing, manufacturing, and sales processes

2.6x as likely to be able to monitor regulatory compliance

3x as likely to be able to perform a mock or real recall

58% more likely to have standardized procedures for order management and delivery

54% more likely to be able to plan for and forecast demand

as compared to All Others.
