Highlights of this release

- 1 Automation: Robots allowed to reprocess documents and SRF336 enhancement**

Automation robots can now reprocess documents if the initial attempt fails. This new functionality assists businesses when the document is open by a user when the robots tried to process it and when a transport is overbooked at the time, but becomes available at a later date.
In addition to this Workforce Report **SRF336 Automation Processing KPI** has been enhanced to include an additional four columns assisting in the description of the new robot retries feature.
- 2 AFT: Prioritisation report**

New Workforce Report **AFT108 Forecast Prioritisation** available for AFT users in Report Management. The new report shows the forecast details including the results of the new forecast prioritisation form. For more information please contact the support team.
- 3 WFR Reports - Ability to have multiple custom templates**

Workforce Reporting now allows multiple custom excel templates for a single report. When custom template are created, Admin users allocate these templates to client specific roles.

New Features, Improvements and Fixes

Improvements

1. The Workflow Task Panel search criteria has been enhanced to include validation matrixes on start date and end date. [\[#26923\]](#)
2. Workforce Report **SMS104 Profile SMS** functionality has been improved at the search criteria stage. When selecting the 'rids' you can now scroll through all possible results. [\[#26374\]](#)
3. SAM Booking Management enhanced to assign the current/future owned rooms to the room owner regardless of the 'Hotel' flag in their profile. [\[#26746\]](#) [\[#26906\]](#)
4. Workforce Report **SRF196 - User Access Level** has been enhanced to include Last Login Date & Time. [\[#26764\]](#)
5. SAM Split booking functionality has been improved so that the SAM user can search for a room to split the booking into. [\[#23295\]](#)
6. Workforce Report **SRF110 DMR Summary** has been enhanced to include daily man-day report, for Camps, for the past 3 years, excluding the service provider (department filter) when the user adds the criteria - (checkbox) to include the daily man-day figure. [\[#26787\]](#)

7. An improvement has been made to the Workforce Reporting start date and end date functionality. For example, if there is a Friday occurring prior to your start date and the search parameters are; "Start date: Next Monday" and "End date: Next Friday", the system will select the following Friday.
8. Workflow has been improved so that an Approver receiving a document with changes to a persons profile are now identifiable and are reflected in the request. [#26260]
9. **SAM | Accommodation** has been improved so that the reporting of Profiles Bookings where they commute from one village to another at same or different locations to display as Arrival & Departure and not a Room Move. [#20830]
10. Room Locks have been updated to allow for selection of a room if an existing booking would be split. If no room is selected, a random room of the same type will be selected by the system. [#25623]

Fixes

1. Fixed an issue where SAM Transport Statuses were inconsistently represented throughout the system. [#26900]
