

INX +Workflow Approvals

Approvals, on the move!

Does your approval process delay decisions in your operation? INX +Workflow Approvals is a mobile app enabling middle step approvers to approve workflow requests, while they are on the move.

The +Workflow Approvals specialty module enables approvers to action requests on-the-go, removing approval delays.

With the INX +Workflow Approvals module, information stored within your INX SAM Suite passes from INX Workflow, through to your organisations approvers via the INX +Workflow Approvals mobile app. Push notifications are received by the approver on their mobile device to alert them to a pending request in real-time. This action then syncs back to the INX Workflow updating the request status.

Inbuilt approvals matrixes within INX Workflow are configured based on your business rules to determine which documents pass to the middle step approver. Once the approver has confirmed the request is ready to pass to the next step there is a final approver matrix to determine the request is passed to the correct queue.

INX +Workflow Approvals is an additional specialty module that can be added to the INX SAM Suite for specific solution requirements.

MAIN ADVANTAGES:

- Seamless integration between the INX SAM Suite's INX Workflow module and INX +Workflow Approvals
- Inform and improve operational decision making
- Data services enrichment
- Approvers are not tied to a laptop in order to process requests
- Real-time push notifications straight to the approvers mobile device
- Manage approvals on the move, removing delays and reducing bottlenecks
- Approvals are searchable via the existing INX Workflow task panel
- Secure user management systems in place to allocate levels of access, security, and ability to approve requests. All users must validate their access via a QR code.
- Auto-synchronisation of updates from the app back to the INX Workflow
- Inbuilt approvals matrix configured based on your business rules which determines which documents pass to the middle step approver.
- Once the Approver has accepted the request to pass to the next step there is a Final Approver Matrix to determine that the request is passed to the correct queue.

INX Software is a globally trusted leader of fully integrated environment, health and safety solutions driving the creation of safer, smarter and sustainable workplaces. Our cloud-based software and mobile-capable solutions are standard across high-risk and complex operations including mining, utilities, oil & gas and government sectors, with over 200 enterprise clients and 700,000 users to date. With a global team of industry experts, we enable health, safety and environmental professionals to manage risk, achieve compliance and enhance operational efficiencies across workforce mobilisation and travel logistics, workplace health and safety, environmental and statutory compliance, training and competency management. © 2021
