

# Enhance your data capabilities and insights

**Use real-time insights to make informed business decisions and improve operational efficiencies. All the data you need is now in one place.**

Our INX Cortex helps businesses leverage and consolidate their internal data across our worldclass software to inform their strategic and operational decision making.

Capturing and consolidating data is hard — it can be a time-consuming, resource demanding and if something breaks, you can be left in the dark.

INX Cortex helps solve this problem by combining and consolidating the data most important to your day-to-day operations, all in one place.

In partnership with Snowflake, the INX Cortex bridges the gap between INX K2fly applications and clients' internal data platforms to provide near real-time insights and instantaneous data sharing capabilities.

It integrates with our workforce logistics and safety software, and combines critical information into one, central command hub.

Take control of your data, and get the bigger picture, with INX Cortex.
