Overview

Organisations that centralise and simplify their contractor and visitor management system help foster a safer, more compliant workforce.

INX Sitepass provides a comprehensive overview of your full workforce, including employees, contractors, and visitors, at every stage of their journey – from engagement to onboarding and training to site access.

Our centralised solution helps you to locate your workforce safely, verify and track important records, deliver training, issue approvals, and broadcast communications across teams and sites.

Features

- Centralised contractor, employee and visitor management solution
- Streamlined onboarding tools and course library to help deliver the best possible training outcomes
- Easily track and verify documents
- Automates the information and evidence-capturing process
- Site access management and reporting to help keep your workplace safe
- Intuitive dashboards that help monitor visitors, contractors, and employees across your site
- Supported by powerful visitor management software
- Powerful integrations and range of integration solutions.

Connect to and manage your entire workforce to continue operating without limitations

Monitoring your workforce for compliance and staying aware of the best specialists available prevents your organisation from experiencing the effects of an immobile workforce.

With INX Sitepass, you gain the power to track overall compliance and workflow statuses within our intuitive dashboards – making it even easier to manage your workforce.

Our intelligent solution empowers your management by enabling them to assign roles and permissions to your workforce for easier tracking and monitoring, conduct spot checks with Sitepass ID to keep your workforce accountable, and instantly suspend contractors, employers and workers as your organisation needs.

INX Sitepass goes one step further and enables you to resource-project by directly connecting your business to new contractors as they are available in the marketplace – helping keep your business operational by having instant access to the best talent available.

Build and assign workflows and deliver training

Automating your business practices enables your workforce to focus on the tasks that require the most attention.

With INX Sitepass, you can easily build and assign an unlimited number of workflows, such as work requirements for your contractors or onboarding requirements for your team – helping your workforce remain competent and proficient.

Through INX Sitepass' workflow automation capability, you can further protect your people and your organisation by prequalifying a contracting company to classify their risk, capture licenses and job-required records, and record business documents and information in a centralised register.

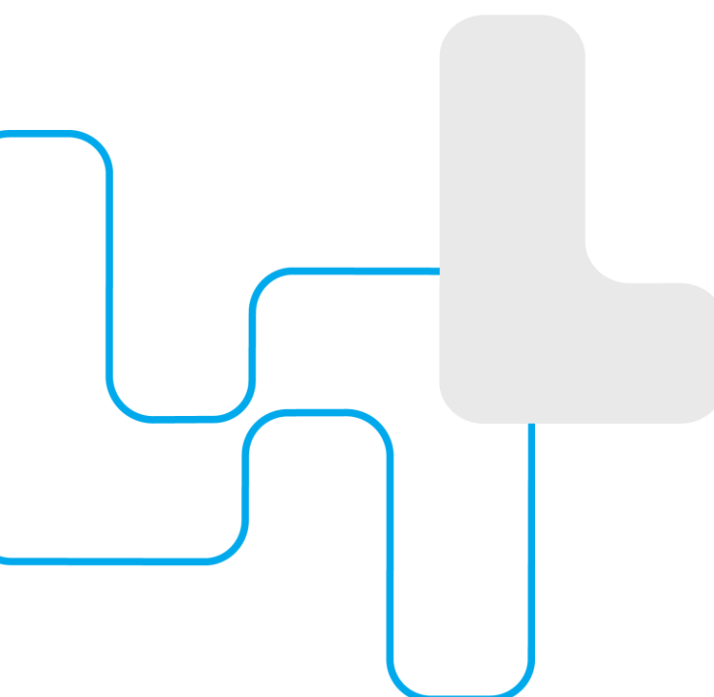

Deliver the best training available to your workforce

When your workers are trained, and your management is aware of their capability, onsite accidents and unsafe behaviour are less likely to happen.

To ensure your team is fully qualified and to help your organisation continue to maintain a skilled workforce, our powerful solution allows you to build, host, and deliver an unlimited number of self-authored training.

INX Sitepass uses SCORM course hosting to deliver interactive content such as corporate and site inductions, policies and procedures, and assessments – delivering course certificates and badges upon completion of each course.

As every training module is fully online, our courses are always available for your workforce – before they enter your worksite or later in their career.

Supported by powerful visitor management software

Easily communicating with your workforce to keep them informed and knowing who is on-site, when, and where are the most important responsibilities of every organisation.

Our powerful workforce management solution can be used to effortlessly send SMS messages to your entire workforce at a moment's notice so you can keep them informed and connected to the broader business at all times.

INX Sitepass can replace every physical attendance book with a digitised version for instant access, enabling your management to monitor the movements of every visitor, contractor, and employee across your entire organisation, with QR codes automatically generated for you to print and deposit at any unmanned location on your site.

Each entrant's photo is captured and stored electronically, with name labels able to be printed for each visitor. And, to support a fast and easy visitation process, visitors can remotely record whether they're signing in or out.

You can also monitor access and safety across every site, with no limitation on the number of sites with electronic sign-ins. Enabling geofencing at each location also means you can record attendance on who has been on-site at any given time on any given day — giving you full transparency over your site.

To help further safeguard your workforce, you can gatekeep access to your site by blocking sign-in access to any contractor or employee who has not been verified.

Keep your workforce mobilised with powerful integrations

Empower your management with the right solutions to help them perform their responsibilities safely. Our integrated contractor and visitor management solution is tailored to the needs of highly complex organisations with a mobile workforce.

INX InControl helps your business to navigate safety and risk challenges using a game-changing single source of truth, and our powerful workforce management solution, INX InFlight, simplifies the coordination of rosters, flights, accommodation, and housekeeping and provides your workforce with immediate access to their travel details.

Our real-time integration of INX Sitepass with INX InControl and INX InFlight enables seamless creation and updates of user profiles. Once a contractor, team member or visitor accepts an invitation and connects to INX Sitepass, their user profile is automatically created in the system.

To further keep your high-risk worksites safe, INX Sitepass can also integrate with the AlcoMeasure Breathalyser unit—designed to help your site administrators automatically screen out any members of your workforce with an unacceptable blood alcohol content (BAC) level.

These integrations connect with INX Sitepass to help you capture all safety-related data and activities and power your workforce management operations.

About INX K2fly

INX Software is a leading provider of software specifically designed to meet the risk, compliance, workforce management, training and reporting needs of high-risk, complex and remote businesses.

We help companies safely mobilise workforces and navigate health, safety, and environmental challenges, to better protect their people and the planet.

Our client book speaks to the global trust placed in our suite of software that supports the operation of safer, smarter, and sustainable workplaces.

We provide solutions across fast-paced and complex industries, including mining, health, transport, energy & utilities, engineering, manufacturing and government sectors.
