Overview

Risk and safety pose a challenge in the workplace, one that can seem daunting to approach effectively. Yet, it's a task that all organisations must successfully address to protect their workforce and remain compliant.

INX InControl is built based on relevant industry methodologies, capturing incident, hazard, injury, audit, inspection, and observation events in a centralised register.

Our powerful solution helps your business navigate risk and safety challenges within one single location – giving you access to real-time information across your people and projects so you can be proactive in your approach to safety.

INX InControl can be further integrated with our suite of workforce management solutions to ensure your operations remain mobilised.

Features

- Record incidents, hazard observations, and injury events within a centralised solution
- Perform inspections, audits and pre-starts with checklists to keep your workforce accountable and protected
- Assign and track corrective actions to your workforce's daily practices
- Integrates with INX+Advanced Injury Management to enhance your return-to-work processes
- Advanced risk register to help correct unsafe work practices
- Leverages ICAM and TapRoot® methodology
- Reporting and graphing capabilities for data-driven safety insights
- Automatic notifications to enable your workforce to stay on top of their actions and events
- Available on iOS and Android for easy on-the-go reporting

Integrated incident management with ICAM and TapRoot® methodologies

Navigating the complexities of workplace safety demands is made easier with a WHS solution, one that can empower your management to stay vigilant for potential safety incidents.

Our solution supports the capture of key details related to incidents, accidents, and near misses in your workplace. By aligning with safety methodologies like ICAM and TapRoot® during your safety investigations, INX InControl allows you to easily document essential information.

To further enable early detection, INX InControl captures an extensive range of configurable event categories. This helps establish a clear trail to the root cause of the event while providing your workforce with a centralised incident management system to proactively manage and mitigate risks within your operations.

You can continue to stay ahead of the safety curve by enabling automatic notifications within INX InControl, ensuring your workforce remains aware of their upcoming and overdue actions and events.

Build the best safety practices through comprehensive auditing

An accountable workforce is a safe workforce.

It's crucial to use a powerful WHS solution that provides you with the right tools that empower your workforce to remain proactive about their safety.

INX InControl helps your management to easily identify hazards and risks, conduct safety audits and establish effective program elements to eliminate or control risks.

Keep your workforce mobilised with corrective action management and an advanced risk register

INX InControl empowers your management to prevent future incidents – protecting your workforce and keeping them mobilised.

Our intuitive solution corrects unsafe work practices by linking events and delegating to HSE employees/contractors to improve your organisation's safety program. For your benefit, this can be seamlessly implemented by assigning and automating outstanding corrective actions.

After configuring the advanced risk register, you can further report on those fields to classify the risk and its priorities – helping standardise the best safety approach to protecting your workforce.

Enhancing return-to-work processes with INX+Advanced Injury Management

With INX+Advanced Injury Management, the focus is on enhancing your organisation's return-to-work processes.

Our powerful toolkit is built into INX InControl, enabling you to document the involvement of the employer, injured worker, and treating doctor throughout the injury management process – from the time of the accident until they return to work.

INX+Advanced Injury Management also enables your management to monitor and record the risk, injury, and work statuses, as well as the insurance claim, case, and liability statuses of your injured employee – all to ensure that your employee is safely remobilised and monitored when they're back on-site.

Powerful OHS reporting capabilities data data-driven insights

INX InControl provides highly configurable reporting and in-depth analytical capabilities so you can track and benchmark your safety performance in a single, powerful solution.

This helps ensure your management team has a clear and comprehensive understanding of their operations and can help make informed decisions based on accurate data.

Gain an overview at every stage of your workforce's journey with INX Sitepass

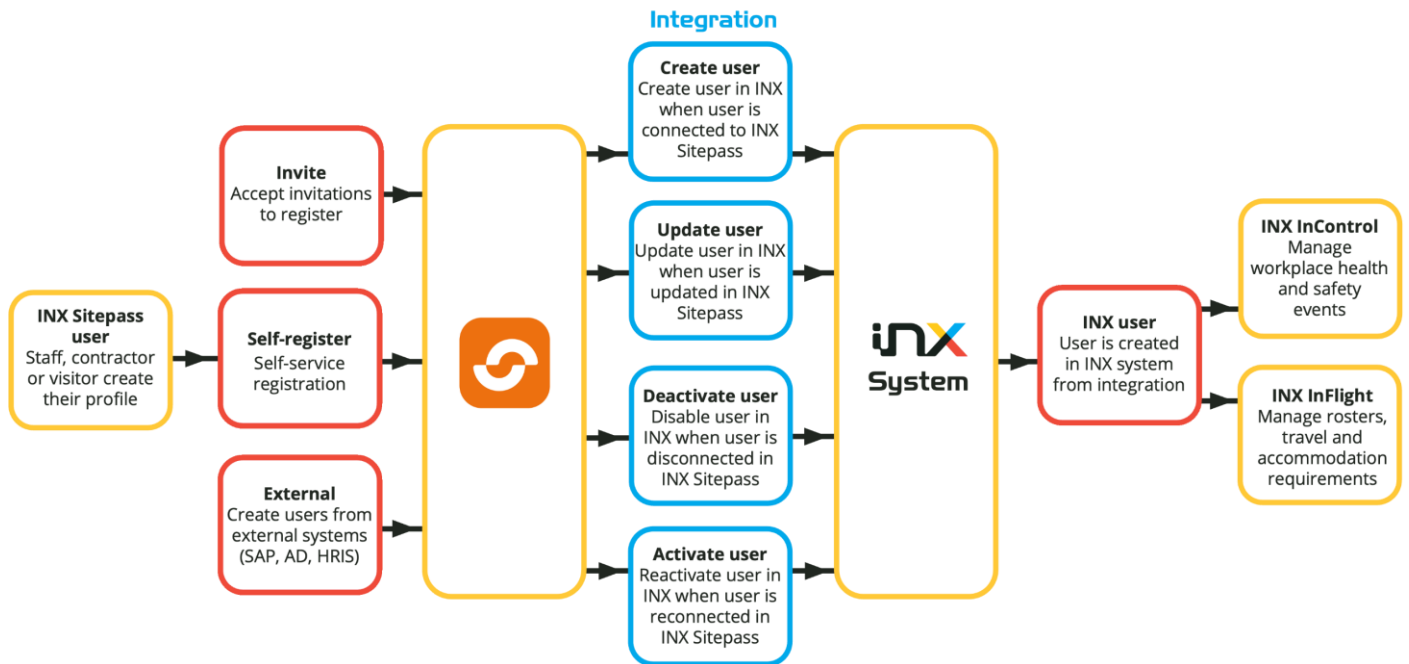

Using smarter solutions to manage your workforce is the first step towards total transparency over your organisation's safety, risk, and compliance procedures.

Integrating INX Sitepass with INX InControl enables you to revolutionise your workforce management capabilities.

You'll be able to register and record visitors to your sites, control access and limit entry only to those authorised to be there – enabling your management to have complete oversight over who is on your site, when and where to better protect your people.

Once integrated with INX Sitepass, you'll gain access to the following:

- Activate and disable INX InControl user profiles from INX Sitepass.
- Capture and report on INX Sitepass user ID numbers from INX InControl.
- Client administrators can now define the INX Sitepass roles they want to create and update in INX InControl.
- Each client can set default values for Workgroups, Homeport and Gender.
- Batch import existing INX user profiles in INX Sitepass.
- Audit integration events and errors via the INX Sitepass configuration.
- Bulk import INX Sitepass users into INX InControl.

Powerful integrations for your workforce management

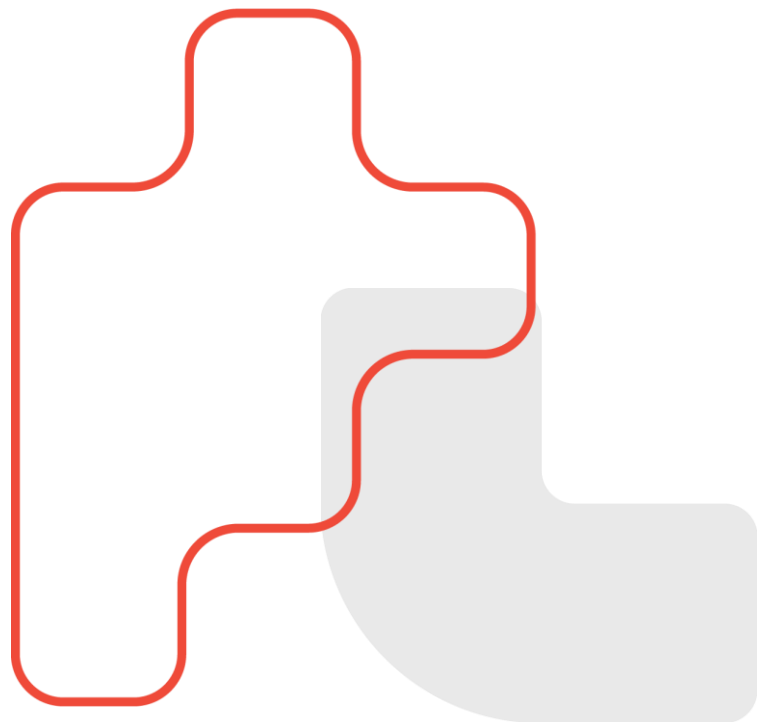

Empower your workforce management team with the right solutions to help them perform their responsibilities safely. Our integrated workforce management platform is tailored to the needs of highly complex organisations with a mobile workforce.

To help streamline the onboarding process, all person profiles can be shared between INX InFlight, INX InTuition, INX InControl, INX InHealth and INX InForm—reducing your administration team’s workload so they can focus on their critical tasks. To support workplace health, safety and compliance, all competencies, compliances and procedures (CCPs) added into INX InTuition are also reflected in these person profiles.

Our INX InForm integration takes functionality to the next level, allowing users to seamlessly send

events from our WHS solution to INX InForm and establish a two-way sync to share obligation conditions effortlessly.

INX+BI also easily integrates with INX InControl to transform how you and your team approach safety and risk challenges – including if CCP role and site entry requirements are met.

About INX K2fly

INX K2fly brings together a range of solutions designed to meet the environmental, governance, safety, compliance and workforce management needs for asset-intensive and complex businesses.

Our software is a trusted and leading provider by some of the world's largest companies to solve their biggest challenges, ensuring critical processes are embedded throughout the entire business.
